ECO Plus 3 series launch

February 1st, 2016 marks the launch of the new 9t-ECO Plus 3 axle range for single wheel application for our disc brake ECO Disc and drum brake ECO Drum.

The advantages of the Eco Plus bearing technology are:

- Low maintenance closed bearing system: 3 years ECO Plus warranty with unlimited mileage.
- Automatically set bearing pre-load by central axle nut with integrated torque limiter.
- Quickly to remove and refit using Formula 1 principle with central axle nut.
- Globally available DIN ISO tapered roller bearings.
- Easy greasing of the bearings via the grease cartridge.
- Further improved sealing by new ECO seal.
- New hubcap (SW 110) with thread and O-ring instead of bayonet fitment, and service friendly torque setting of only 350Nm.
- Press-fit pole wheel with 90 teeth.

More visible differences:

- Full hub flange design
- Axle nut instead of axle bolt

!! Very Important !!

Brake calculations have to be re-calculated and brake systems have to be programmed accordingly
